## **Post-Installation Care Guide**

# After Installation (Care and Maintenance)

## 1. Initial Settling and Cleaning

- Remove any leftover sand or dust with a soft-bristle broom.
- If joint sand was used, lightly spray water with a hose on a fine mist setting.
- Avoid walking on the surface or placing any weight on it for 24 hours while it settles.

## 2. Protection and Sealing (Optional)

- You may apply polymeric sand or a sealer once the patio is completely dry.
- This helps prevent weeds, shifting, and staining.
- Use products compatible with Techo-Bloc materials.

## 3. Regular Maintenance

- Sweep the patio frequently to keep it clean.
- Check drainage after heavy rains.
- If you notice gaps between pavers, add dry sand.
- Avoid using pressure washers or harsh chemicals.

## 4. Winter Care

- Do not use corrosive salt or metal tools.
- Prefer magnesium-based products or sand.

## 5. Annual Inspection

- Check edges, level, and joints once a year.
- If a paver has shifted, lift it, add sand, and reset it.
